Education

University of Washington (Seattle) Expected Fall 2026
Bachelor of Science in Computer Science (GPA: 3.7 / 4.0) *Seattle, WA*

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, Swift, C, C++
Frameworks & Libraries: React, Next.js, Node.js, Express.js, Expo Go, FastAPI, SwiftUI, CoreML, PyTorch
Tools & Cloud: Git, GitHub Actions (CI/CD), Docker, AWS (EC2, S3, Lambda, RDS), PostgreSQL, MongoDB, Supabase, Render, Redis, REST APIs, WebSockets, Jest, System Design

Experience

Kairo - Postcard Journal Apr 2026 – Present
Founder & iOS Engineer *Seattle, WA*

- Built and shipped a **weekly photo-journal iOS app** for close friends, solo from empty repo to **App Store submission**, using **Expo**, **React Native**, **TypeScript**, and **Supabase (PostgreSQL)**.
- Enforced privacy at the **database layer** with **Postgres Row-Level Security** policies and triggers, gating a **synchronized weekly reveal** and per-user limits server-side alongside **offline-first photo capture**.
- Designed an **AI-assisted build pipeline** around **Claude Code**, pairing an unattended branch-isolated agent loop with a **typecheck + iOS bundle** merge gate to ship **39 PRs and 16 migrations** without regressions.

University of Washington Reality Lab Jan 2026 – Mar 2026
Software Engineer *Seattle, WA*

- Co-developed **Blubble**, an **Apple Vision Pro** assistant for neurodivergent users, integrating **AVAudioEngine** and **Nvidia Sortformer** for real-time speech diarization.
- Engineered a multimodal tone analysis engine using **CoreML (DistilBERT)** to identify emotional intent and sarcasm with **80% accuracy** in user testing.
- Implemented an intelligent context engine using **GPT-4o-mini** and **RAG** to dynamically render Wikipedia-backed visual aids within the spatial environment.

University of Washington Personal Robotics Lab Dec 2024 – Jun 2025
Researcher *Seattle, WA*

- Engineered a **real-time teleoperation pipeline** using **Python, Docker, and MuJoCo**, enabling live visualization of hand-pose data from **Apple Vision Pro** for precise robotic control.
- Applied **CNN-based pose estimation models** across 100+ simulated trials, improving alignment accuracy by **88.6%** and reducing motion jitter by **30%**.
- Presented research at the **UW Allen School Research Showcase** to 300+ faculty and industry attendees, highlighting AI-driven motion analysis for immersive teleoperation.

Projects

PodParse | *Figma, User Research, Prototyping*

- Led **user research across 50 UW students** to identify critical gaps in podcast consumption, finding that **83% lacked tools** to verify claims despite podcasts heavily influencing their worldview.
- Won **Best Potential Impact** — one of only 3 awards granted in a **200+ person class** — for addressing misinformation and passive consumption through voice-assisted, low-friction AI tooling.

Campus Paths | *Java, JavaFX, JUnit*

- Built a **campus map application** that visualizes shortest walking routes using a **custom weighted graph and Dijkstra's algorithm**, demonstrating core data structures and algorithm design.
- Implemented a **JUnit test suite** to validate graph correctness and pathfinding accuracy across edge cases.
